Your Mac computer features an SDXC (Secure Digital Extended Capacity) card slot that lets your Mac read and write data to your DataLogixx Storage device.

Your DataLogixx comes PREFORMATTED for use with you Mac Air.

STEP ONE – locate the SD Card Slot on the right side of your Mac Air

STEP ONE – insert the DataLogixx Storage device SD Card Slot as shown:

How does my Mac use the media inserted into the SD card slot?

Your computer recognizes your new memory inserted into the SD card slot as a SD storage device. You can mount, read from, and write to the DataLogixx just like you can with any other SD storage device.

I put the card in the slot, but it didn't mount. What should I do?

Remove the card and insert it again. Sometimes the DataLogixx card won't mount properly if you put it into the slot too slowly.

How do I remove the DataLogixx from the SD card slot?

Before you remove the card, allow any data transfer to complete. To eject the card, drag the icon that represents the card to the Trash. After the icon disappears from your desktop, you can remove the card from the slot. Don't remove a card while your Mac is sleeping, as this could lead to data loss. Always wake your computer and eject the DataLogixx card before removing it from your Mac.

I need support for my DataLogixx Storage Device?
